Color controller Tool Documentation

Fred Qiao

1. Copy paste code into Python script editor and run the script

2. Then there will be a window showing all the controllers u have in the scene. For each controller, there will be 2 buttons and one blank box.

3. The first button is to choose the corresponding controller.

4. The second button is to change color for the corresponding controller. Each click will assign the controller to a new color.

5. The box is to type in the color you want to assign to the controller. Eg, red. If the color is not in library, maya will report error message.
